

Good morning. As you may be aware, the State Land Office recently sent two communications concerning the number of wells that have been plugged and abandoned but the site has not been reclaimed or released. I am forwarding the 11/30/18 letter to you all to review for your respective companies. The companies on the list will likely get contacted by our district offices as well.

The attached PDF list is what was provided by the SLO with their 11/30/18 letter. I had the OCD IT staff run a query in excel with a column titled "Over1YearSincePA" so we can determine how many are past the one year mark. The total is 344 wells out of 659.

The list of people on this email is, quite frankly, contacts that I personally have and I realize I am not forwarding this to all who are listed. Trais and Jim, if you could make sure it is distributed to your memberships I would appreciate it.

Please research your records, and if you have completed the reclamation work, submit the required paperwork to have the site released. If you have not completed the field work, please do so and then submit the paperwork.

If you have any questions, please don't hesitate to contact me.
